 templates/override/includes/modules/content/shopping_cart/tpl_cm_sc_product_listing_qtpro.php
 templates/override/includes/hooks/shop/siteWide/qtPro.php

NOTE: Make sure you are using the "override" template and have it selected in:

Admin : Configuration : My Store : Template Selection

Otherwise you must copy the following files:

- templates/override/includes/modules/content/shopping_cart/tpl_cm_sc_product_listing_qtpro.php
- templates/override/includes/hooks/shop/siteWide/qtPro.php

TO:

- templates/YOUR SELECTED TEMPLATE/includes/modules/content/shopping_cart/tpl_cm_sc_product_listing_qtpro.php
- templates/YOUR SELECTED TEMPLATE/includes/hooks/shop/siteWide/qtPro.php

NOTE: If your are on Phoenix 1.0.7.15, upload and replace this file from the folder "Legacy_Phoenix_1.0.7.15":

- admin/products_attributes.php

Higher versions Phoenix 1.0.7.16+, do not need this, it's already included in core.

Changed files:

NONE

If you are using Ajax ttribute Manager add-on:

Please use the latest version: AJAX-AttributeManager-V3.3.5._CE_Phoenix
It includes support for QTPro, just set in:
admin/attributeManager/includes/classes/attributeManagerConfig.class.php
\$this->add('AM_USE_QT_PRO', true);

If you are using Options Images add-on:

Please use the latest version: Options Images Phoenix v2.0
Install either pi or content product info options images module to add the required database entries.
Then you can switch the options images module off or uninstall it (without the option "remove database entries".
Option images support is included in the qtpro product info options module, EXCEPT for "Sequenced Drop Downs"

=====

Installation

1. Copy all new files into the appropriate folders

Support for Option Images

Has been removed in this version. It will be readded once Options Images has been updated.

- 2a. [mandatory] In Admin =>Modules => Pi[product_info] install and configure the module "QTPRO Options".**
- 2b. [mandatory] In Admin =>Modules => Pi[product_info] uninstall the core module "Options and Attributes".**

OR

- 2a. [mandatory] In Admin =>Modules => Content[product_info] install and configure the module "QTPRO Options".**
- 2b. [mandatory] In Admin =>Modules => Content[product_info] uninstall the core module "Options and Attributes".**

3. [optional] In Admin =>Modules => Pi[product_info] install and configure the module "QT Pro Stock Table".

OR

3. [optional] In Admin =>Modules => Content[product_info] install and configure the module "QT Pro Stock Table".

4. You must activate attribute tracking here: admin -> catalog -> product attributes -> When adding/editing an attribute, you must check the "Track Stock?" checkbox.

5. If you are using the single_radioset option in product info, you should add the product_info.php page to the pages list in Admin =>Modules => Header Tags => Table Row Click jQuery.

Settings:

You'll find all main settings here:

Admin =>Modules => Pi[product_info] "QTPRO Options"

OR

Admin =>Modules => Content[product_info] "QTPRO Options".

Uninstall Removes Database entries

If you installed QT Pro for testing purpose and you are sure not to use QT Pro any more, set this to "true!" and all database tables will be removed. You will loose all stock values for options/attributes.

Product Info Attribute Display Plugin

The plugin used for displaying attributes on the product information page
See below under "Display Plugin Information" for details.

Show Out of Stock Attributes

If True: Attributes that are out of stock will be displayed.

If False: Attributes that are out of stock will not be displayed.

Has no effect for sequenced dropdowns.

Mark Out of Stock Attributes

Controls how out of stock attributes are marked as out of stock.

Display Out of Stock Message Line

If True: If an out of stock attribute combination is selected by the customer, a message line informing on this will displayed.

Used for multiple dropdowns only.

Prevent Adding Out of Stock to Cart

If True: Customer will not be able to ad a product with an out of stock attribute combination to the cart. A javascript form will be displayed.

Use Actual Price Pull Downs

NOTE: If you have more than one option per product, this can only be used with a satisfying result with single_dropdown or single_radioset.

If True: Option prices will displayed as a final product price.

Combine untracked options:

For single drop down or singel radio: combine also options which stock is not tracked.

Use Option/Attribute Sort Order

Removed. The module uses now the options and attribute values core sort order

Admin Stock Warning ENGLISH (and your other store languages)

Language definition used in admin QT Pro Stock Warning

Admin Stock Button ENGLISH (and your other store languages)

Language definition used in admin QT Pro Stock Button

Admin Track Stock ENGLISH (and your other store languages)

Language definition used in admin QT Pro Stock Button

Display Plugin Information

pad_multiple_dropdowns.php - Display stocked product attributes first as one dropdown for each attribute.

Class Name: pad_multiple_dropdowns

This class generates the HTML to display product attributes. First, product attributes that stock is tracked for are displayed, each attribute in its own dropdown list. Then attributes that stock is not tracked for are displayed, each attribute in its own dropdown list.

This Class is NOT compatible with "**Use Actual Price Pull Downs**" if more than one option is combined.

pad_sequenced_dropdowns.php - Display stocked product attributes first as one dropdown for each attribute with Javascript to force user to select attributes in sequence so only in-stock combinations are seen.

Class Name: pad_sequenced_dropdowns

This class generates the HTML to display product attributes. First, product attributes that stock is tracked for are displayed, each attribute in its own dropdown list with Javascript to force user to select attributes in sequence so only in-stock combinations are seen. Then attributes that stock is not tracked for are displayed, each attribute in its own dropdown list.

This Class is NOT compatible with "**Use Actual Price Pull Downs**" if more than one option is combined.

pad_single_dropdown.php - Display stocked product attributes as a single dropdown with entries for each possible combination of attributes.

Class Name: pad_single_dropdown

This class generates the HTML to display product attributes. First, product attributes that stock is tracked for are displayed in a single dropdown list with entries for each possible combination of attributes.. Then attributes that stock is not tracked for are displayed, each attribute in its own dropdown list.

This Class is compatible with "**Use Actual Price Pull Downs**" if more than one option is combined. Option prices will displayed as a final product price.

pad_single_radioset.php - Display stocked product attributes as a single radioset with entries for each possible combination of attributes.

Class Name: pad_single_radioset

This class generates the HTML to display product attributes. First, product attributes that stock is tracked for are displayed in a single radioset with entries for each possible combination of attributes.. Then attributes that stock is not tracked for are displayed, each attribute in its own dropdown list.

This Class is compatible with "**Use Actual Price Pull Downs**" if more than one option is combined. Option prices will displayed as a final product price.

REMEMBER: You must activate attribute tracking here:

admin -> catalog -> product attributes ->

When adding/editing an attribute, you must check the "Track Stock?" checkbox.

=====

Ready! You can now use QTPro!

Created with the Personal Edition of HelpNDoc: [Full-featured EBook editor](#)

Update from previous version

Compatibility:

Version: 7.3.2.:

OSCOM CE Phoenix 1.0.7.15+

Tested with Phoenix 1.0.1.16

PHP: 7.0 - 7.4

Update from version 7.3.1 to 7.3.2:

1. Uninstall the QtPro module (if you're using it):

Admin : Modules : Content: QTPro Options [product_info]

2. Upload and replace the following file from Upload directory:

- o includes/modules/content/product_info/cm_pi_qtpro_options.php

3. Install the QtPro module (if you're using it):

Admin : Modules : Content: QTPro Options [product_info]

Update from version 7.3.0 to 7.3.1:

1. Upload and replace the following files from Upload directory:

- o includes/hooks/admin/categories/catQtPro.php
- o includes/system/override/qtpro/pad_base.php
- o includes/system/override/qtpro/pad_sequenced_dropdowns.php
- o templates/override/includes/hooks/shop/siteWide/qtPro.php
- o admin/includes/languages/english/hooks/admin/siteWide/swQtPro.php
- o admin/includes/languages/espanol/hooks/admin/siteWide/swQtPro.php
- o admin/includes/languages/german/hooks/admin/siteWide/swQtPro.php

Update from version 7.2.0 to 7.3.0:

1. Uninstall the QtPro module:

Admin : Modules : Content: QTPro Product Listing [shopping_cart]

2. Install the core module:

Admin : Modules : Content: Product Listing [shopping_cart]

3. Upload and replace all files from Upload directory

4. Delete the following files

- o includes/languages/english/modules/content/shopping_cart/cm_sc_product_listing_qtpro.php

- includes/languages/espano/modules/content/shopping_cart/cm_sc_product_listing_qtpro.php
- includes/languages/german/modules/content/shopping_cart/cm_sc_product_listing_qtpro.php
- includes/modules/content/shopping_cart/templates/tpl_cm_sc_product_listing_qtpro.php
- includes/modules/content/shopping_cart/cm_sc_product_listing_qtpro.php
- includes/system/override/qtpro/order_qtpro.php
- templates/default/includes/hooks/shop/checkout_process/qtpro_hooks.php (delete file and folder)
- templates/default/includes/hooks/shop/site_wide/qtPro.php

5. Make sure you are using the "override" template and have it selected in:

Admin : Configuration : My Store : Template Selection

Otherwise you must copy the following files:

- templates/override/includes/modules/content/shopping_cart/tpl_cm_sc_product_listing_qtpro.php
- templates/override/includes/hooks/shop/siteWide/qtPro.php

TO:

- templates/YOUR SELECTED TEMPLATE/includes/modules/content/shopping_cart/tpl_cm_sc_product_listing_qtpro.php
- templates/YOUR SELECTED TEMPLATE/includes/hooks/shop/siteWide/qtPro.php

6. If your are on Phoenix 1.0.7.15, upload and replace this file from the folder "Legacy_Phoenix_1.0.7.15":

- admin/products_attributes.php

Higher versions Phoenix 1.0.7.16+, do not need this, it's already included in core.

Update from version 7.1.0 to 7.2.0:

1. Upload and replace the following files:

- includes/system/override/qtpro/pad_base.php
- includes/system/override/qtpro/pad_multiple_dropdowns.php
- includes/system/override/qtpro/pad_sequenced_dropdowns.php
- includes/system/override/qtpro/pad_single_dropdown.php
- includes/system/override/qtpro/pad_single_radioset.php

Update from version 7.0.0 to 7.1.0:

1. Replace the following file with the unmodified core file:

- includes/actions/add_product.php

2. Upload:

- includes/system/override/qtpro/actions/os_c__actions_add_product.php

Update from all previous versions to 7.1.0:

1. Uninstall all QtPro modules

2. Revert all manual core file modifications you applied.

3. Delete the following files:

- admin/stock.php
- admin/includes/languages/english/stock.php
- admin/includes/languages/espanol/stock.php
- admin/includes/languages/german/stock.php
- includes/classes/order_qtpro.php
- includes/classes/pad_base.php
- includes/classes/pad_multiple_dropdowns.php
- includes/classes/pad_sequenced_dropdowns.php
- includes/classes/pad_single_dropdown.php
- includes/classes/pad_single_radioset.php
- includes/hooks/shop/checkout_process/qtpro_hooks.php
- includes/hooks/shop/siteWide/qtPro.php

3. Upload and replace all provided files, see installation.

4. Replace the following file with the unmodified core file:

- includes/actions/add_product.php

5. Install the modules, see installation.
