

OpenCart URLs

For Phoenix Cart by frankl

Features:

- Redirects OpenCart SEO friendly URLs to work with Phoenix Cart
- For example, <https://www.example.com/shiny-red-apples> to https://www.example.com/product_info.php?products_id=4
- URL can be further processed by Phoenix Cart SEO URLs extensions.

Installation:

- **BACKUP YOUR DATABASE AND FILES**
- Copy the seo_url table (usually called oc_seo_url) from your OpenCart database to your Phoenix Cart database. Rename to seo_url.
- Copy file in the catalog directory to your Phoenix Cart server. If an unaltered version of notfound_404.php from already exists on your server you can safely overwrite.
- Add the following line to your .htaccess file:

```
ErrorDocument 404 /notfound_404.php
```

- That's it! URLs will redirect. Any not found urls will show the 404 page.
