Store Logos Multi 2.4

Responsive and Localized Store Logos

Compatibility:

Phoenix 1.0.7.3+

Tested with Phoenix 1.1.0.8

PHP 7.0-8.5

Change Log:

Version 2.4:

- **Fixed logo upload updates so only the intended language and size setting changes.**
- **Fixed fallback when a language-specific logo is missing.**
- **The header now lists only available logo files in its responsive image sources.**
- **Corrected headings and file input labels on the admin upload page.**

Version 2.3:

- Updated for Phoenix 1.0.9.4+
- Tested with Phoenix 1.0.9.4 and PHP 8.3
- Updated template container class in header module to match actual Phoenix standards

Version 2.2:

- Updated for Phoenix 1.0.8.2+
- Tested with Phoenix1.0.8.11
- Updated coding to match actual Phoenix standards

Version 2.1:

- Updated for Phoenix 1.0.7.12+
- Tested with Phoenix1.0.8.0
- Updated copyright info to Phoenix Cart
- Updated coding to match actual Phoenix standards

Version 2.0:

- Updated for Phoenix 1.0.7.3+
- Updated Admin page to bootstrap design matching actual admin page
- Updated header module to abstract executable module
- Updated coding to match actual Phoenix standards

How it Works:

Responsive and Localized Store Logos will add a new Logo page to your admin where you can upload 3 different logo sizes for each of your store languages.

A new alternative header content module is included which will display the Logo just like the standard core logo module.

Purposes:

1. Serve different logo sizes to allow the visitors browser to select the most appropriate for it's device size and resolution. The browser will automatically download only the logo which fits best it's need.

Example: You are using a banner style store logo which is set to half of the header width (col-6)

- for a standard desktop screen and a retina tablet a width of about 640px would be good
- for a retina desktop device with double resolution like i-mac, 1280px would be better
- for a small simple mobile phone 320px would be optimum to save download time.

This add-on allows you to upload 3 different sizes of your store logo (1280px, 640px and 320px for this example)

If your store logo uses the full width (col-12), upload for example the sizes 2560px, 1280px and 640px.

2. To show a different logo for each store language, upload a set for that language. If no big logo exists for the selected language, the module uses the default language big logo. Medium and small logos use the matching size from the default language when available. Only available files are offered to the browser.

If you wish to automatically serve different image sizes for all your store images:

KissIt Image Thumbnailer Pro for OsC 2.3.4.1 CE Frozen and all Phoenix versions available:

Store Logos Multi

Version 2.4 for Phoenix 1.0.7.3+

Installation

- 1. Upload all new files included in the Uploads folder**
- 2. In admin => Configuration => Store Logo Multi, upload a big logo for your default language. Upload medium and small versions, and language-specific versions, as needed. A valid big logo in the selected or default language is required for the header logo to display.**
- 3. In admin => Modules => Content => Install => Logos Multi[header]**

All Done!

Update to version 2.4

- 1. In admin => Modules => Content => Uninstall => Logos Multi[header]**
- 2. Upload and replace all new files included in the Uploads folder**
- 3. In admin => Modules => Content => Install => Logos Multi[header]**
- 4. In admin => Configuration => Store Logo Multi, check the saved logos for each language and upload any missing size you want to offer.**
