

Hide Boxes Documentation

Tabla de contenido

Installation	3
Update	4

Pro version available:

[Hide Modules on different viewports](#)

The Hide Modules app lets you add Bootstrap responsive display classes and other CSS classes to side-column boxes and navbar, header, footer and footer-extra modules. You can choose which viewport sizes show each module.

Hide Boxes on Mobile

Version 1.4 Phoenix

by @raiwa

raiwa@phoenixcartaddons.com

www.phoenixcartaddons.com

Support:

https://phoenixcart.org/forum/app.php/addons/free_addon/hide_boxes_on_small_devices/support

Compatibility:

CE Phoenix 1.0.8.6+

Tested with Phoenix 1.0.9.1, 1.1.0.8.

PHP: 7.3 - 8.5.

=====

What does this module do?

This module adds Bootstrap responsive display classes to selected side-column boxes. Select installed boxes to hide below the Bootstrap md breakpoint (768 px with the default Bootstrap settings). Boxes remain visible at md and larger sizes. Storefront hiding requires JavaScript; saving the admin selections does not.

Note:

For third-party box modules, the box template must include a CSS class matching its filename without .php, with underscores replaced by hyphens. Only installed box modules are supported:

Examples:

filename => class name:

bm_whats_new.php => bm-whats-new

bm_search.php => bm-search

Installation:

0a.) Back up your files.

0b.) Back up your database.

1. Upload the files from the "uploads" directory to your shop, preserving the directory structure.

For a new installation, these files add the Hide Boxes module. If the module is already installed, follow the Update instructions and replace its existing files.

2. In the shop admin, install and enable the Hide Boxes header tag module. Select the boxes to hide and save the settings. Uncheck all boxes and save to stop hiding boxes.

Admin > Modules > Header Tags > Hide boxes

Enjoy!

Hide Boxes on Mobile

Version 1.4 by raiwa - Copyright (c) Rainer Schmied - raiwa@phoenixcartaddons.com - www.phoenixcartaddons.com

Changes in version 1.4 - 15 October 2026:

- Restricted storefront selections to valid installed box names and safely encoded JavaScript values.
- Escaped saved box names in the admin summary to prevent stored HTML injection.
- Made checkbox saving independent of JavaScript, including clearing all selections.
- Applied mobile visibility classes to every matching box element.
- Checked compatibility with PHP 8.5

Changes in version 1.3:

- Replaced the legacy template function with the Phoenix Template function for Phoenix 1.0.9.1

compatibility.

- Replaced the jQuery script with native JavaScript.

Updating from an earlier version:

0a.) Back up your files.

0b.) Back up your database.

1. Upload the files from the "uploads" directory to your shop, preserving the directory structure and replacing the previous add-on files. No reinstall is required. Review your selected boxes and save the settings after updating.

Enjoy!
